

Allworx® Call Queuing™ Software

Distributing incoming calls for small and medium businesses

It's finally here ... the cost-effective call queue solution designed for small businesses!

The Allworx® Call Queuing™ solution displays on your PC and integrates with your Allworx phones using any Allworx system.

Call Queuing

Multiple simultaneous queues. Allworx Call Queuing™ supports up to 10 queues with 16 calls per queue and 32 calls across all queues, at any time, when using an Allworx 24x (when using an Allworx 6x, you can have 10 queues of 8 calls per queue and 16 calls across all queues at any time)

Answering options. Unlimited number of Allworx phones can be programmed to ring when a caller enters the queue, and the first phone to pick up gets the call. This makes it possible to set up workgroups assigned to specific queues. In addition, each queue can be answered by any phone by dialing a simple system extension. (The call queue feature can be combined with built-in VoIP support for attractive international calling rates.)

Remote user support. Users at remote sites can participate in call queues at the touch of a button — now companies can really offer 24-hour support by hiring people in various time zones.

Call detail reporting. The data from the call queues can be exported easily to Microsoft Excel or other spreadsheets for further analysis.

Visual indicators. Allworx phones indicate the status of the queue line through variations in the color and blinking of feature keys.

Custom greetings. You can record your own custom greeting for each queue; each queue can be configured differently.

Wait notification. Callers in queue will hear system hold music (separately sold option) or a custom message played at programmed intervals.

Call Queues Statistics tab. Users can display the number of calls received into queues, retrieved from queues, abandoned while in queue, hang-ups while in queue and transferred out of queues for each queue.

Descriptive queue names. In addition to its queue number, each queue can be assigned a friendly descriptive name which appears whenever drop down menus are available, or on your phone display when the phone is ringing.

Programmable function keys. Allworx phones can be set so that specific keys light up to represent specific call queues, making it easy to identify which queue is signalling. Users can “login” and “logout”.

First in, first out. Callers waiting in queue can be assured that their call will always be answered in the order it was received. Callers have the option of aborting the queue and proceeding directly to voicemail, if so desired.

Continuous status. The status of each call queue is continuously updated on your PC — allowing you to quickly check vital statistics such as number of callers in queue, longest wait time, and average wait time.

Software key activation. The Call Queuing feature can be activated at any time by purchasing a software key from an authorized Allworx reseller. This is a system-wide activation and requires no additional cost per handset.

Presence routing. Users can direct their presence settings to route incoming calls to any of the call queues (in addition to voicemail, auto attendants, another extension or an outside line or cell phone).

Ring settings. Each phone can be set to respond to queue conditions differently, including different ring cadences, ringing after a user-specified number of callers enter the queue or after callers have exceeded a user-specified time period. Calls can be directed to managers or co-workers if wait time becomes too long.

“CVTSA is using just about every feature available to us in the Allworx system, and there are more features than anyone could imagine.”

Dr. Leslie Kutcher, Partner, CVTSA

Queued Calls

Displays on your PC and is continuously updated with vital information.

Callers in Queue

System shows number of callers in each queue.

Queue

Lists all active queues, each queue can be given specific extensions and descriptions.

Queue	Longest Wait (mm:ss)	Average Wait (mm:ss)	Callers In Queue															
			1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
x4410 Account Payables	01:24	00:44	1	1														
x4411 Customer Support	00:53	00:53	1	1														
x4412 Order Processing	03:27	02:25	1	1	1	1	1	1	1									
x4413 Reservations	01:05	00:45	1	1														
x4414 Personnel	00:33	00:33	1	1														
x4415 Sales Team	03:10	02:15	1	1														
x4416 Technical Support	02:07	01:04	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	

Longest Wait

System tracks the longest wait time of caller in queue.

Average Wait

System tracks average wait time across all callers in queue.

Call Queue Statistics

- ▶ Allows businesses to easily run and view statistics in real-time.
- ▶ Allows small businesses to identify unique calling trends within the system.
- ▶ Abandoned (long) data allows for better staffing management.
- ▶ Valuable to any organization requiring better management of call distribution and tracking.

Call Queue Statistics						
Received	Serviced	Abandoned (short)	Abandoned (long)	Exit Key Pressed	Timed Out	Collection Period
